MEGHAN TOBIN

(978) 844-6333 | megt1310@gmail.com | linkedin.com/in/meghantobin/ | https://meghan-tobin.github.io/

EDUCATION

University of Illinois at Urbana Champaign *August 2020 - December 2023*
Bachelor of Science in Computer Science

EXPERIENCE

Software Engineer II | Everfox - Common Platform *January 2025 - Present*

- Led development of Magic Mirror, a data-transfer platform connecting the global network to an air-gapped engineering environment, evolving an early proof of concept into a mission-critical tool used by 10+ engineering teams. Defined the roadmap for architecture, reliability, and feature improvements, and led engineering efforts to deliver key milestones on schedule.
- Drove product planning by gathering requirements from 10+ engineering teams, identifying workflow gaps, and prioritizing platform enhancements to support their data-transfer needs and enable company-wide adoption.
- Orchestrated a complex, company-wide rollout of Magic Mirror, coordinating cross-team dependencies, aligning release timelines with ongoing development, and managing deployment risks to drive adoption across engineering.
- Improved the product based on user feedback by building a migration dashboard for real-time transfer monitoring and self-service troubleshooting. Developed company-wide training, documentation, and workflow guides to support adoption and ongoing operations.

Machine Learning Consultant | Private Client *September 2025 - January 2026*

- Partnered with a startup's technical lead to define an ML approach for classifying voxelized LiDAR data, translating business requirements and technical constraints into a modeling strategy.
- Benchmarked multiple ML approaches to evaluate classification performance and tradeoffs, identifying promising solutions for distinguishing poles from surrounding vegetation and terrain.
- Synthesized experimental results into a recommended modeling approach and roadmap for future implementation, providing the client with a clear path toward production.

Software Engineer I | Everfox - Trusted Thin Client (TTC) *January 2024 - January 2025*

- Launched and managed an internship program across 5+ engineering teams, overseeing interviews, project selection, intern placement, and onboarding for 8 interns. Program success led to expansion across all company office locations.
- Directed multiple intern-led engineering projects from planning through delivery, including a production hardware testing suite adopted by the testing organization to replace a manual process. Trained project leads on roadmapping, milestone planning, and execution.
- Delivered security and code quality improvements across multiple product teams, including seccomp hardening for government compliance and integration of Coverity static analysis into CI for automated code analysis and reporting.

PROJECTS | Portfolio: https://meghan-tobin.github.io/ Github: https://github.com/meghan-tobin

Where's the Whimsy | Developing an iOS social app that lets users create, discover, and join local quests to encourage exploration and add whimsy to everyday life. Python, Swift, PostgreSQL
Org-Verify | Developing an AI-assisted tool to streamline verification of animal shelters, nonprofits, and pet volunteer organizations by consolidating and evaluating information from trusted sources. [Tech stack TBD]
Bijoux Breakdown | Built a web tool to help jewelry makers organize inventory and calculate pricing for handmade pieces. Rust, Axum, HTML, CSS, JavaScript

SKILLS

Languages: Python, C++, Rust, C, Java, JavaScript, SQL, Swift
Tools & Technologies: Linux (RHEL), AWS, Google Cloud, Docker, Git, Jenkins, PostgreSQL, MongoDB, SELinux
