EDUCATION

University of Illinois at Urbana Champaign

August 2020 - December 2023

Bachelor of Science in Computer Science

EXPERIENCE

Software Engineer II | Everfox

February 2025 - Present

- Led the transformation of a proof-of-concept codebase into a mission-critical platform by improving architecture, introducing documentation standards, and enforcing engineering best practices. Defined rollout strategy, managed and mentored a team of interns, and delivered key features and reliability improvements under aggressive timelines.
- Drove migration readiness for a company-wide rollout by gathering requirements from 10+ engineering teams, building platform enhancements for team-specific workflows, and coordinating launch readiness across stakeholders
- Led rollout execution across 10+ engineering teams, resolving cross-team dependencies, addressing production and migration risks, and adjusting implementation scope to prevent delays and ensure successful platform adoption.
- Built operational dashboard for migration monitoring and repair workflows in response to stakeholder feedback, enabling real-time tracking programs, self-serve debugging, and issue resolution across teams. Designed and delivered company-wide training programs, documentation, and workflow guides covering end-to-end platform usage, including testing, migration processes, and dashboard operation.

Machine Learning Consultant | Private Client

September 2025 - Present

- Partnered with a client director to define the ML approach for voxelized LiDAR classification, translating technical constraints and requirements into a structured modeling strategy.
- Designed and executed experiments on voxelized LiDAR data, prototyping and benchmarking multiple machine learning models to evaluate performance tradeoffs under real-world dataset constraints.
- Synthesized experimental results into a recommended implementation strategy and deployment roadmap, enabling transition from exploratory modeling to a scalable ML solution.

Software Engineer I | Everfox

January 2024 - January 2025

- Developed low-level product functionality across multiple engineering teams, including seccomp-based security hardening for government compliance, cross-product bug fixing, and reliability improvements. Integrated Coverity into the CI workflow and developer toolchain (IDE and build system), enabling automated static analysis and organization-wide code quality reporting.
- Operated a newly established internship program across 5+ engineering teams, supporting all aspects of execution including hiring, interview evaluation, project sourcing and assignment, onboarding structure, and technical training. Program success led to rollout across all office locations.
- Led the largest intern project end-to-end, delivering a production-ready hardware testing suite adopted by the testing organization. Delivered training for incoming project leads on roadmapping, milestones, and execution standards.

PROJECTS | <website link>

Where's the Whimsy | Python, Swift, PostgreSQL | Quest-based iOS social app for adding “whimsey” into everyday life.

AI Project | tools | description

Bijoux Breakdown | Rust, Axum, HTML, CSS, JavaScript | Web-based tool for organizing and pricing handmade creations.

SKILLS

Programming Languages: Python, Rust, C++, C, Java, Swift, JavaScript, SQL, MIPS

Tools & Systems: Linux, Git, Docker, Jenkins, Coverity, Artifactory, AWS, Google Cloud, CMake, GDB, Valgrind, PostgreSQL, MongoDB, React, PyTorch, pandas, NumPy, Jupyter, Unreal Engine
