MEGHAN TOBIN

(978) 844-6333 | megt1310@gmail.com | linkedin.com/in/meghantobin/ | https://meghan-tobin.github.io/

EDUCATION

University of Illinois at Urbana Champaign *August 2020 - December 2023*
Bachelor of Science in Computer Science

EXPERIENCE

Software Engineer II | Everfox - Common Platform *January 2025 - Present*

- Led development of Magic Mirror, a data-transfer platform connecting a global network with an air-gapped engineering environment. Grew an early proof of concept into a mission-critical tool adopted by 10+ engineering teams.
- Owned product planning by gathering requirements from engineering teams, identifying workflow gaps, and prioritizing feature enhancements based on organizational needs.
- Managed a team of engineers in defining the technical roadmap and delivering improvements across architecture, reliability, and product functionality.
- Drove company-wide product rollout, coordinating release timelines, managing implementation risks, and developing training materials and documentation to support adoption.
- Translated user feedback into product enhancements, including a real-time transfer monitoring dashboard and self-service troubleshooting solutions.

Independent Machine Learning Consultant | Private Client *September 2025 - January 2026*

- Partnered with the technical lead of an early-stage venture to translate business requirements and technical constraints into an ML strategy for classifying voxelized LiDAR data.
- Benchmarked multiple ML approaches, evaluating classification performance and tradeoffs to identify promising solutions for distinguishing utility poles from surrounding vegetation and terrain.
- Presented findings and recommended a technical approach and implementation roadmap to guide future production development.

Software Engineer I | Everfox - Trusted Thin Client (TTC) *January 2024 - January 2025*

- Established and managed an internship program spanning 5+ engineering teams, overseeing candidate evaluation, project selection, placement, and onboarding for 8 interns. Program success led to expansion across all office locations.
- Directed intern-led engineering projects from planning through delivery, including a hardware testing suite that replaced a manual process within the testing organization. Trained project leads in roadmapping, milestone planning, and execution.
- Delivered security and code quality improvements for core product teams, including seccomp hardening for government compliance and integration of Coverity static analysis into CI pipelines to automate code analysis and reporting.

PROJECTS | Github: https://github.com/meghan-tobin

Where's the Whimsy | Developing an iOS app where users can create, discover, and join weekly quests to break out of their routines and try new experiences. | Python, Swift, PostgreSQL
Safe Shelter | Researching and developing an AI-assisted platform to streamline the verification of animal shelters, nonprofits, and pet volunteer organizations by consolidating and evaluating organizational information. | Python, FastAPI, PostgreSQL
Bijoux Breakdown | Built a web application helping independent makers manage product inventory and calculate pricing for handmade goods. | Rust, HTML, CSS, JavaScrip

SKILLS

Languages: Python, Rust, C++, C, Java, JavaScript, Swift, SQL
Tools & Technologies: PostgreSQL, MongoDB, AWS, Google Cloud, Docker, Linux (RHEL), Jenkins, Git, SELinux
